

# Wires and cables for industrial applications

Edition 2019/06

**HUBER+SUHNER**  
Excellence in Connectivity Solutions

RADOX® - for harsh environment

# Wires and cables for industrial applications

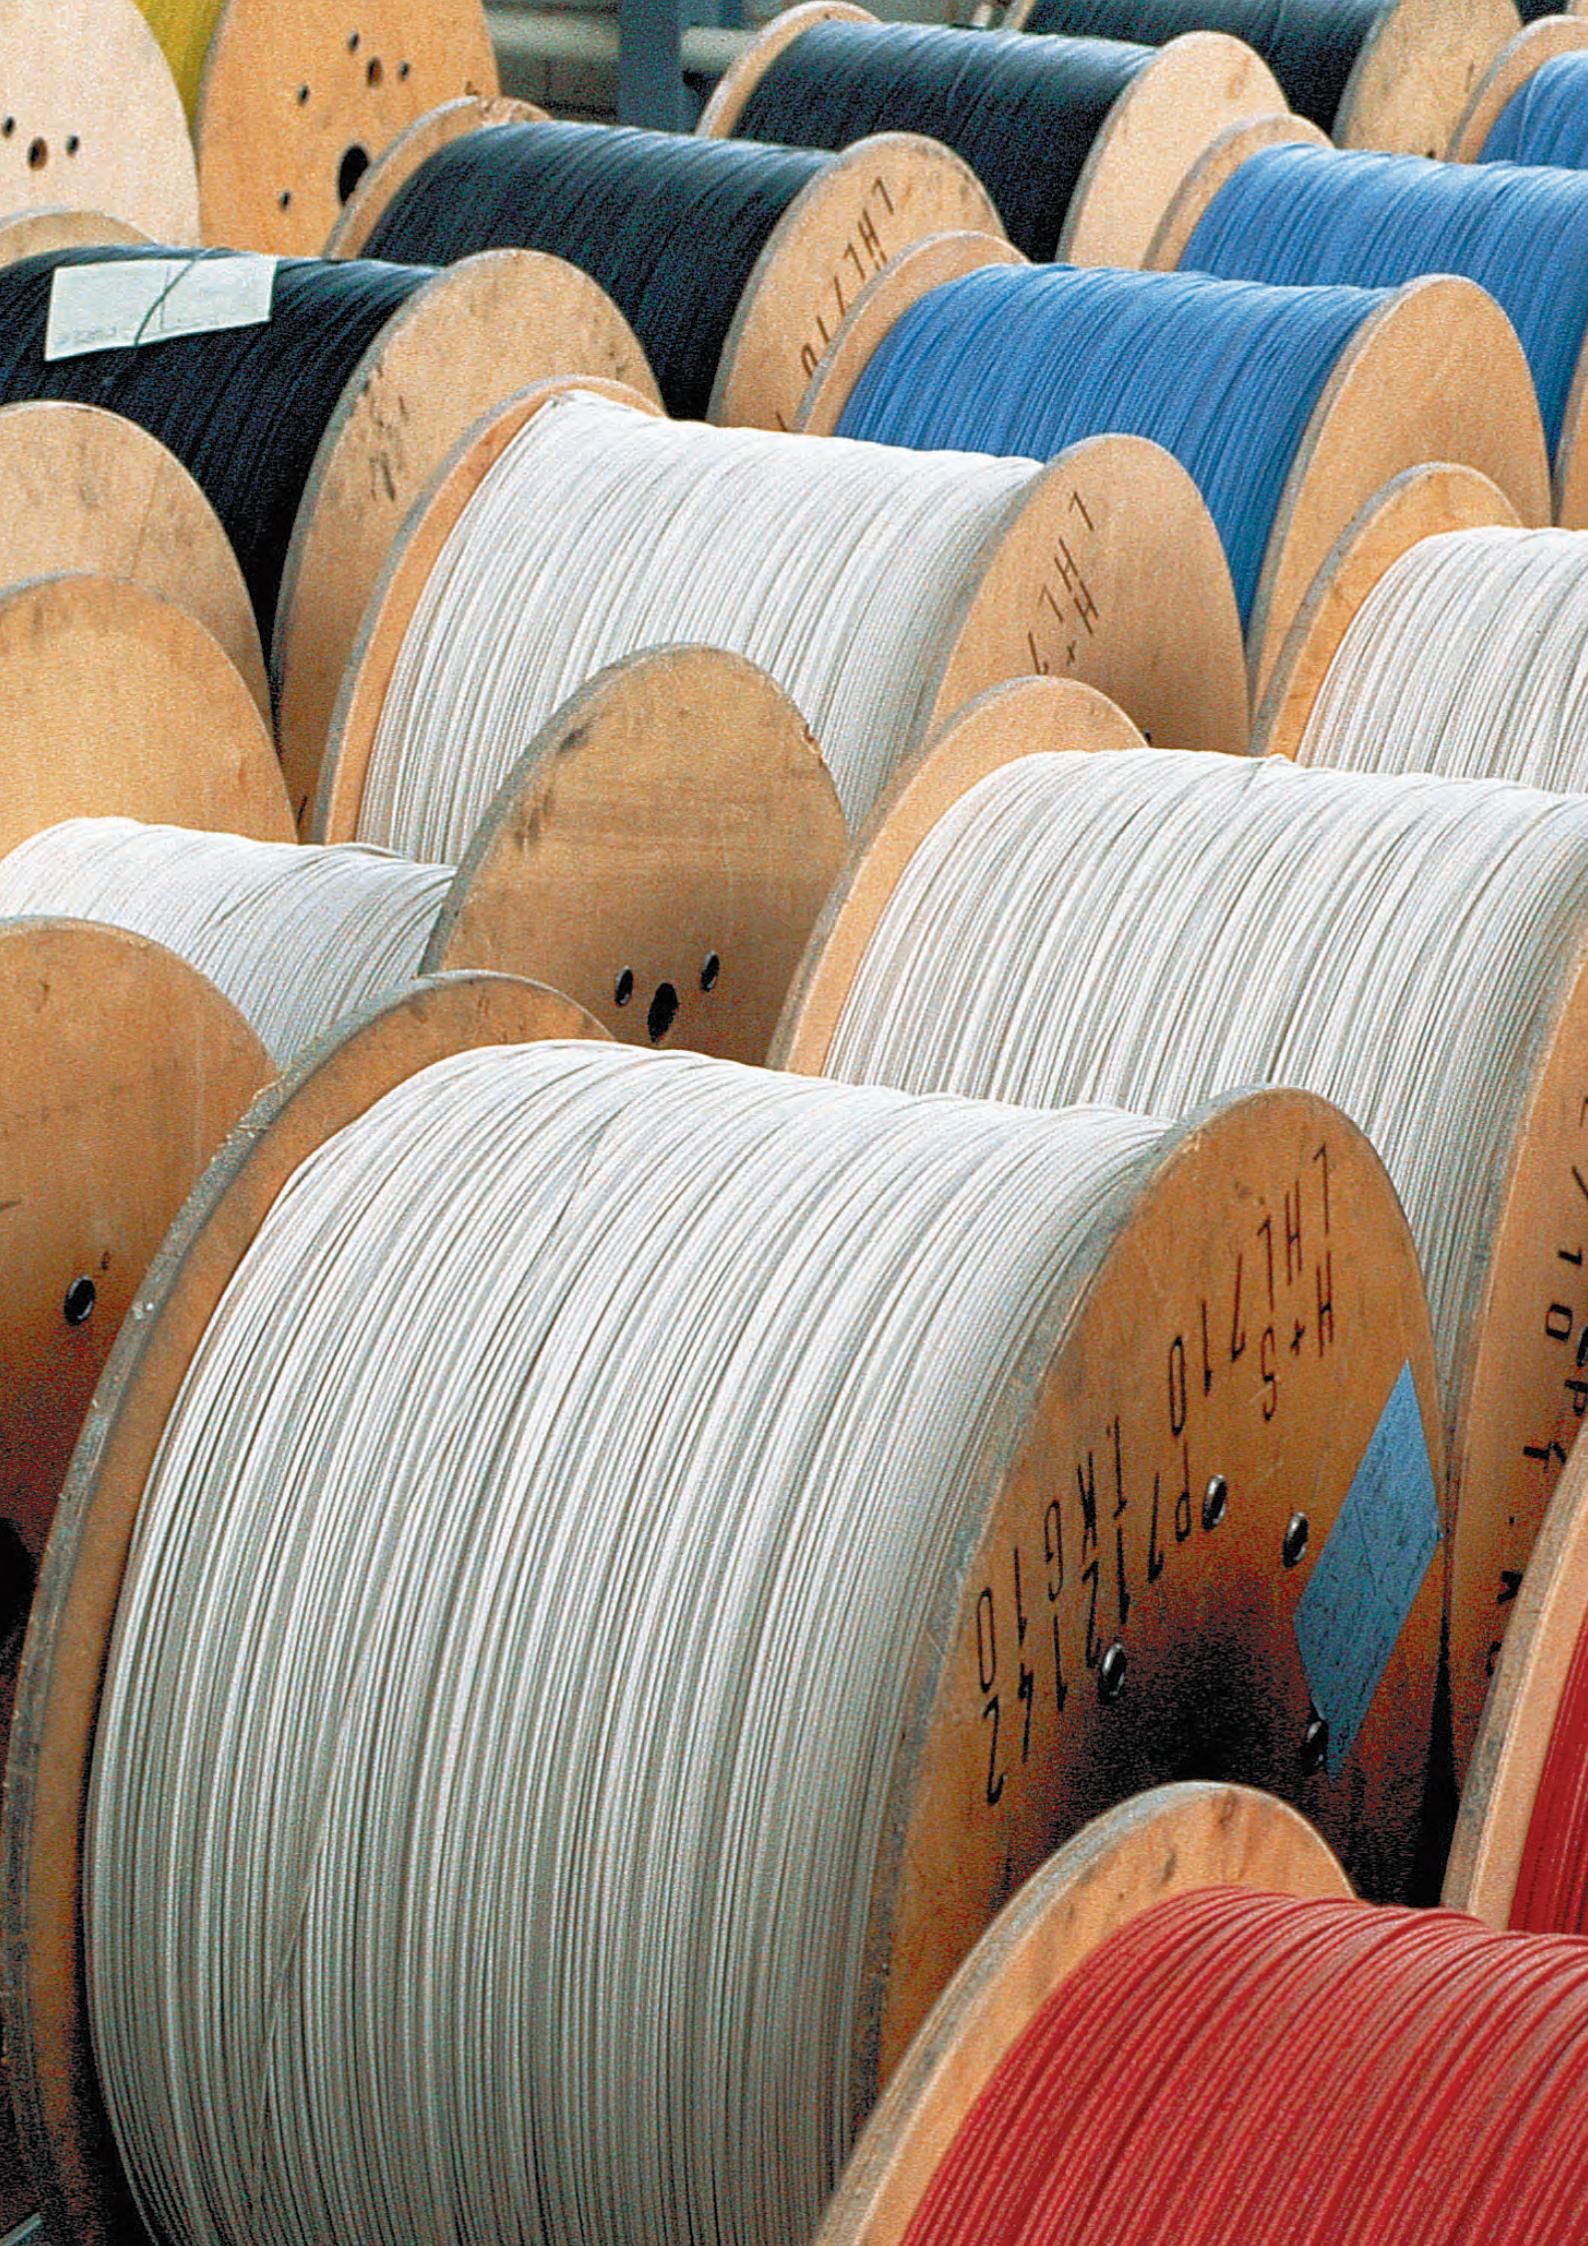

Introduction Short description of the application fields	5
RADOX® 125, RADOX® 155 Control and power cables, flexible single cores	19
RADOX® UL/CSA Flexible single cores, cables and wires UL recognised	35
RADOX MFH Control/instrumentation and power lightweight cables	51
RADOX® Databus High data frequency transmission cables	55
General technical information	67

## Your partner for connectivity solutions

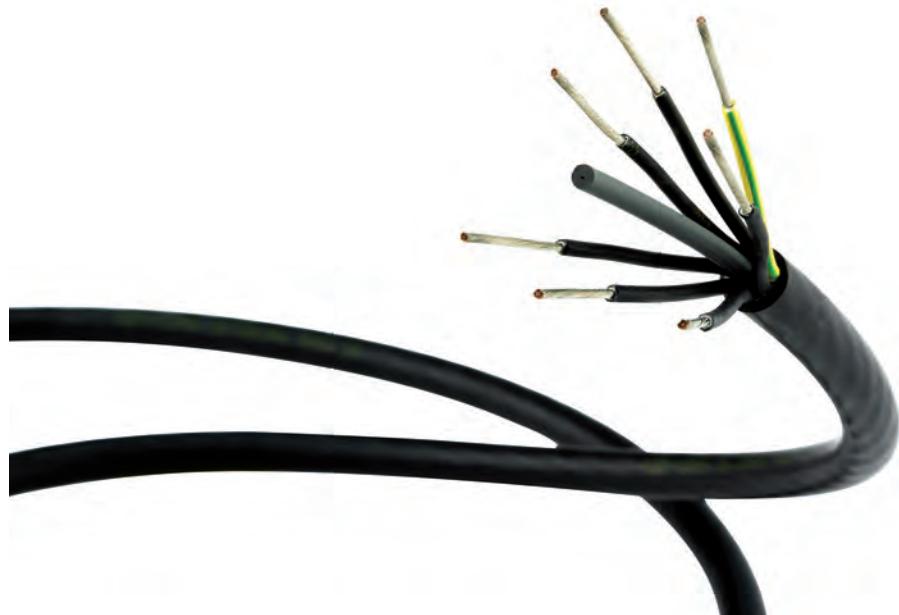

The HUBER+SUHNER Group is a leading international manufacturer of electrical and optical interconnectivity components and systems. Our main markets are communication, transport and industry. Under one roof, we combine technological capabilities in the three core fields of Radio Frequency, Fiber Optics and Low Frequency.

RADOX®, the registered HUBER+SUHNER trademark, is synonymous with high-grade wire and cable products developed and produced in-house. RADOX electron-beam crosslinked insulating and jacketing materials, possess the special properties required for developing and manufacturing technically superior products. Its high temperature resistant, flame retardant, reduced wall thickness and easy process ability make it the ideal insulating material for wires and cables in industrial applications.

# RADOX® by HUBER+SUHNER – for the toughest conditions

RADOX, the registered HUBER+SUHNER trademark, is synonymous with high-grade WIRE+CABLE products developed and produced in-house. RADOX insulating and jacketing material, which are predominantly electron-beam crosslinked, possess the special properties required for developing and manufacturing technically superior products.

We can also provide customer specific solutions.

All our cables fully comply with the European directives  
76/769/EWG, 2003/11/EG, 2000/53/EG, 2003/53/EG and 2011/65/EU (RoHS).

# Cables for power and signal transmission in energy distribution

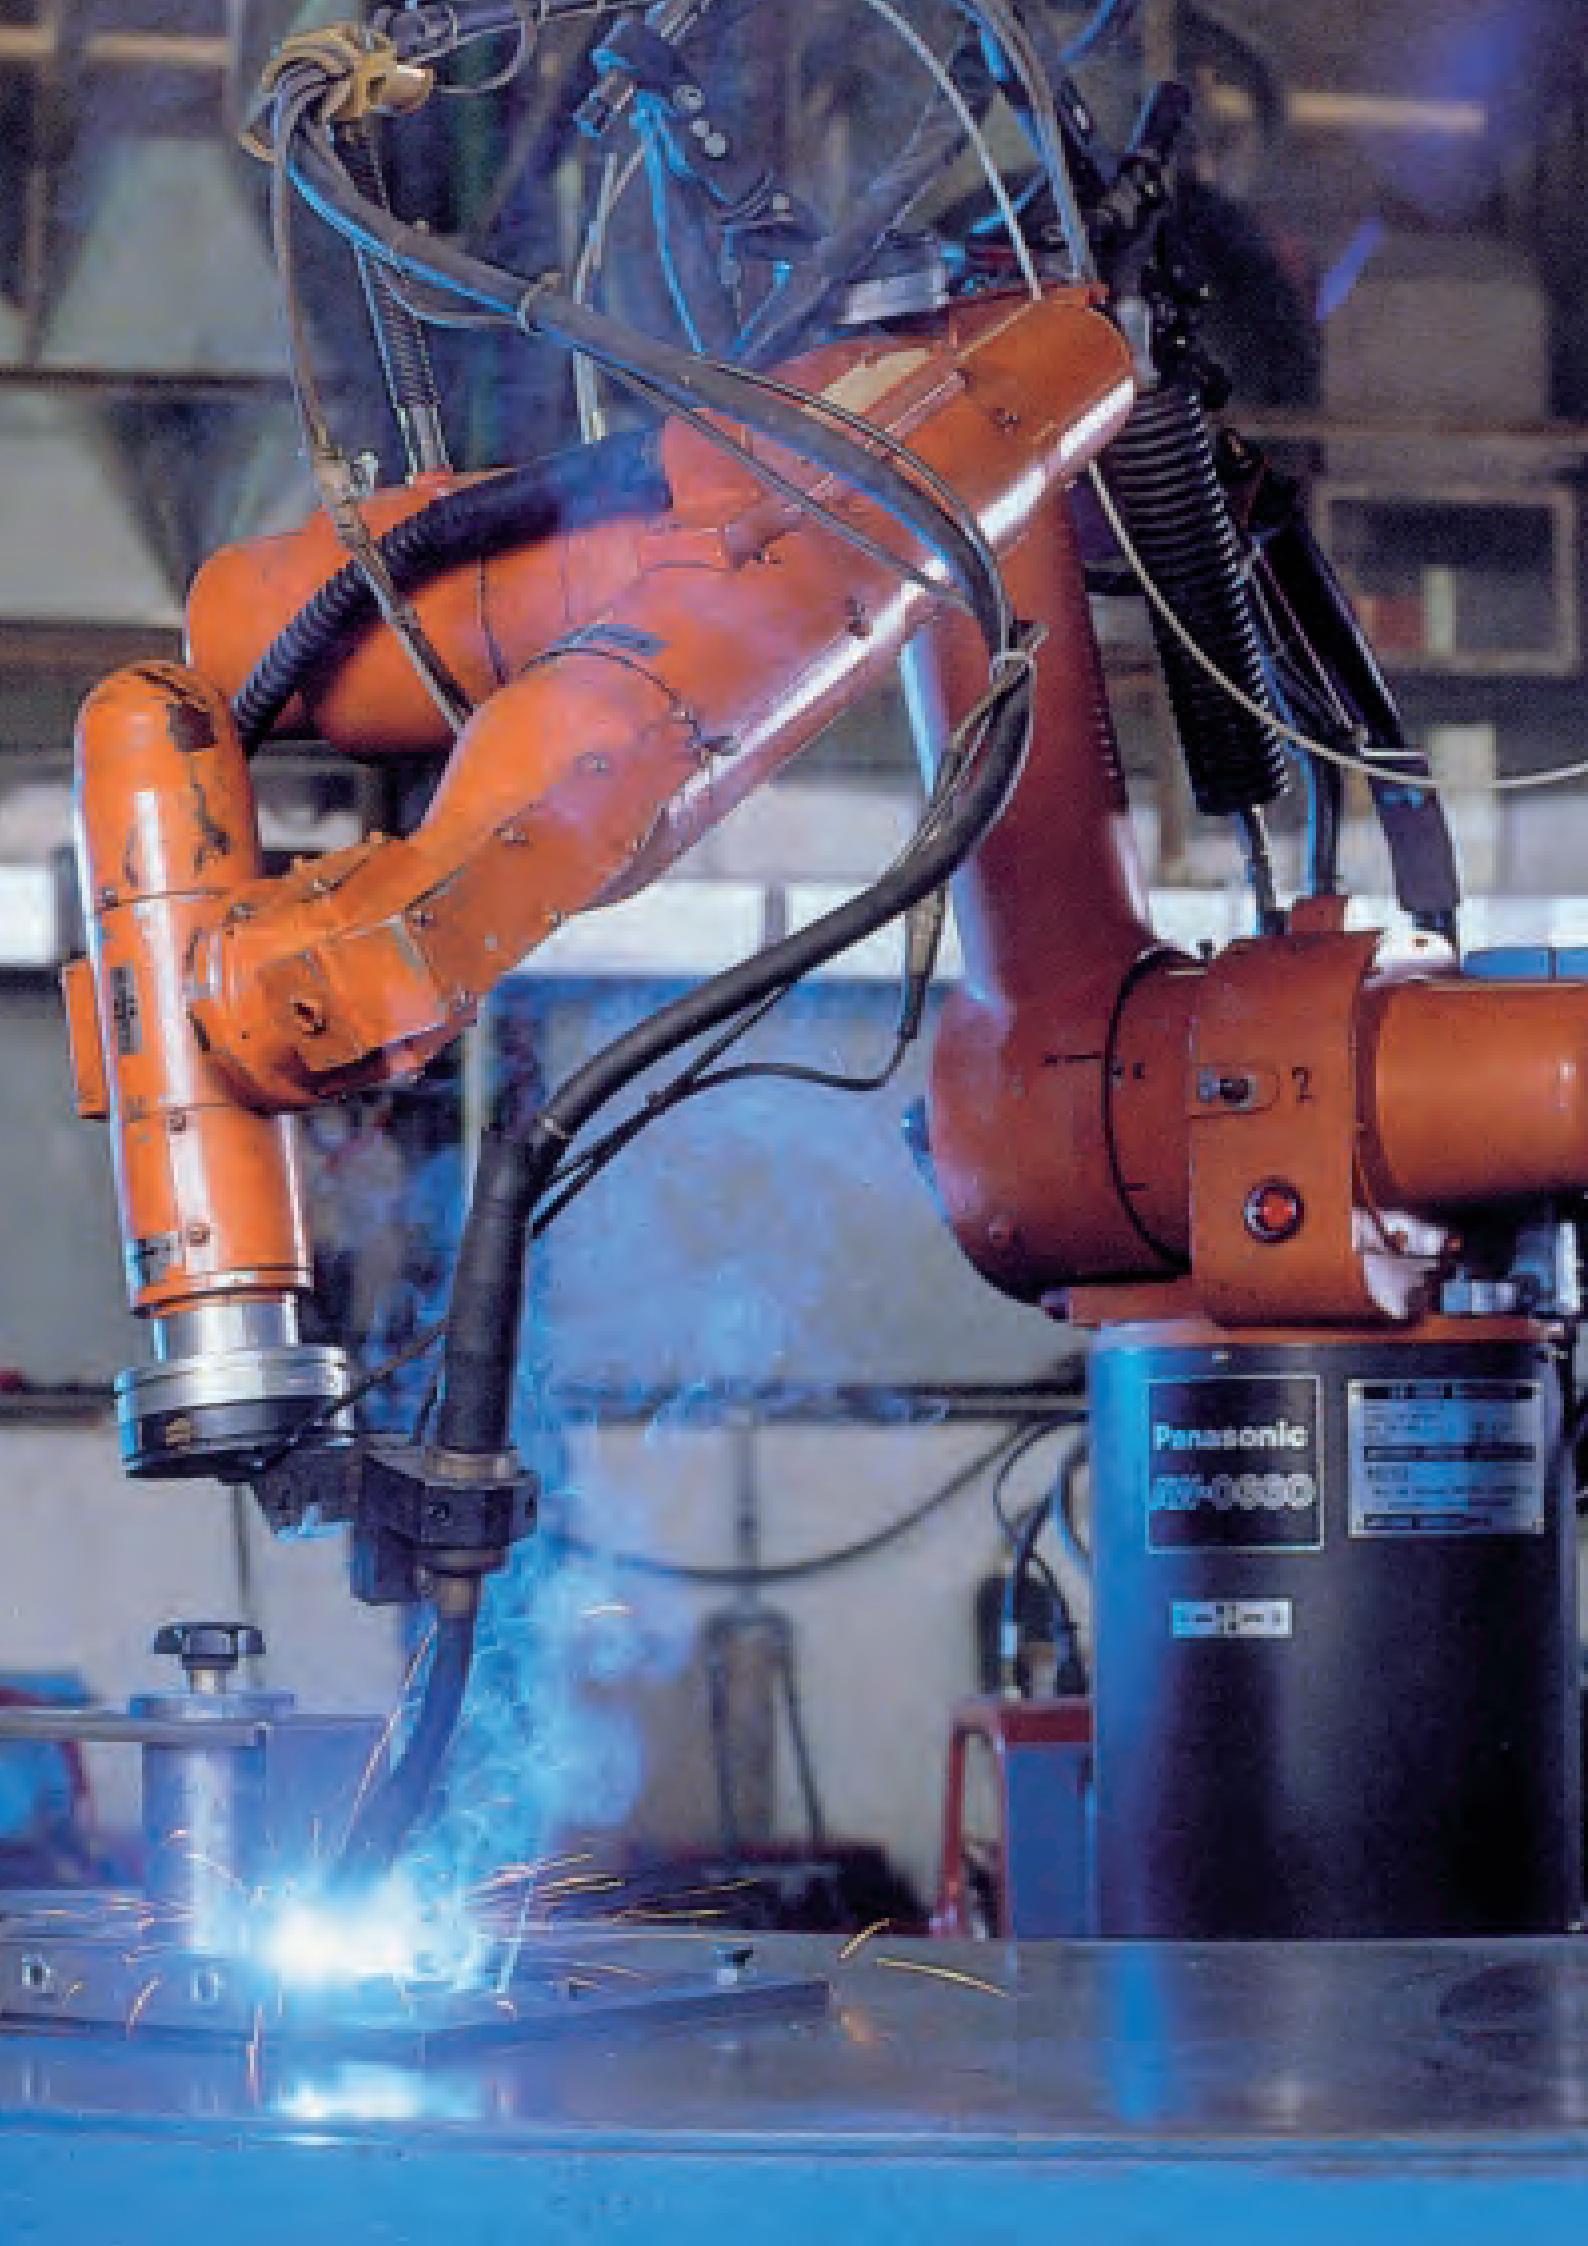

Electronic control systems automatically control processes, transmit data and govern motions such as swivelling and conveying etc. The reliability and uptime of such highly automated, complex technical systems is necessary to ensure the efficiency of state-of-the-art production processes. Trouble-free power supply must also be assured at all times. Our cables and system solutions are therefore applied precisely in areas where dependability is a top priority and outstanding heat resistance, high power handling capacity, ruggedness and compact design are a must.

## Flexible single cores, signal, control and power cables

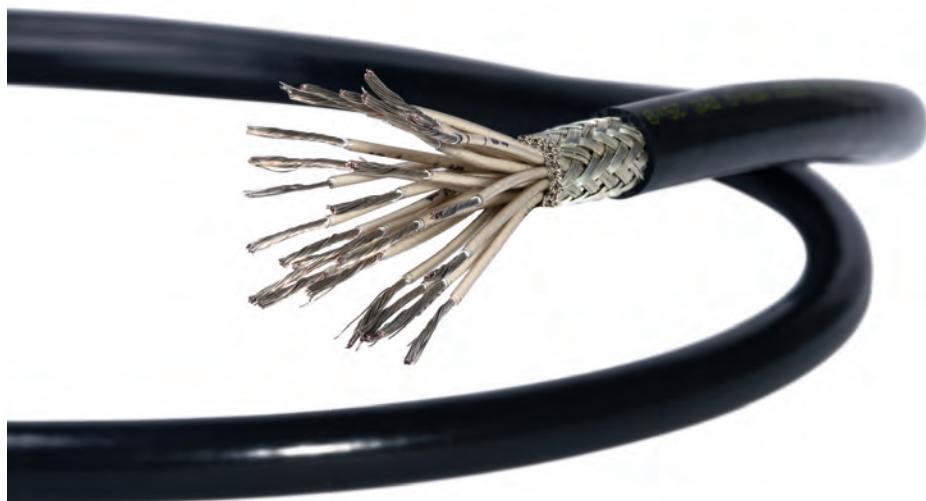

- RADOX® control and power cables, single core cables
- RADOX® UL cables

RADOX multi core and single core cables have a high power handling capacity and heat resistance. They have been specifically designed for the construction of high performance, compact and lightweight equipment.

- Outstanding heat resistance
- High power handling capacity
- Ruggedness and compact design
- High flexibility
- Easy processing

# Cables for power and signal transmission in automation applications

The field of industrial automation has extremely rigorous demands on the performance and quality of the cables used. A cable will achieve top performance only if it offers absolute flexibility and a long service life. In addition, these products must satisfy highly specific customer requirements. Our modular system is the ideal solution for responding to such needs.

## Top quality cables for industrial automation applications with a long service life

- RADOX® control and power cables, screened and unscreened
- RADOX data cable for Ethernet and CAN-BUS

Our single core and multi core cables are distinguished by their thin insulation walls and their tight bending radius. The hybrid cables offer a multifunctional solution in a single cable.

- Thin insulation walls
- Tight bending radii
- High flexibility
- Abrasion resistance
- High current carrying capacity
- Long service life

HABERL + SÖHNE FLEETKOD Schilzenbach

# Cables for power and signal transmission in coil winding applications

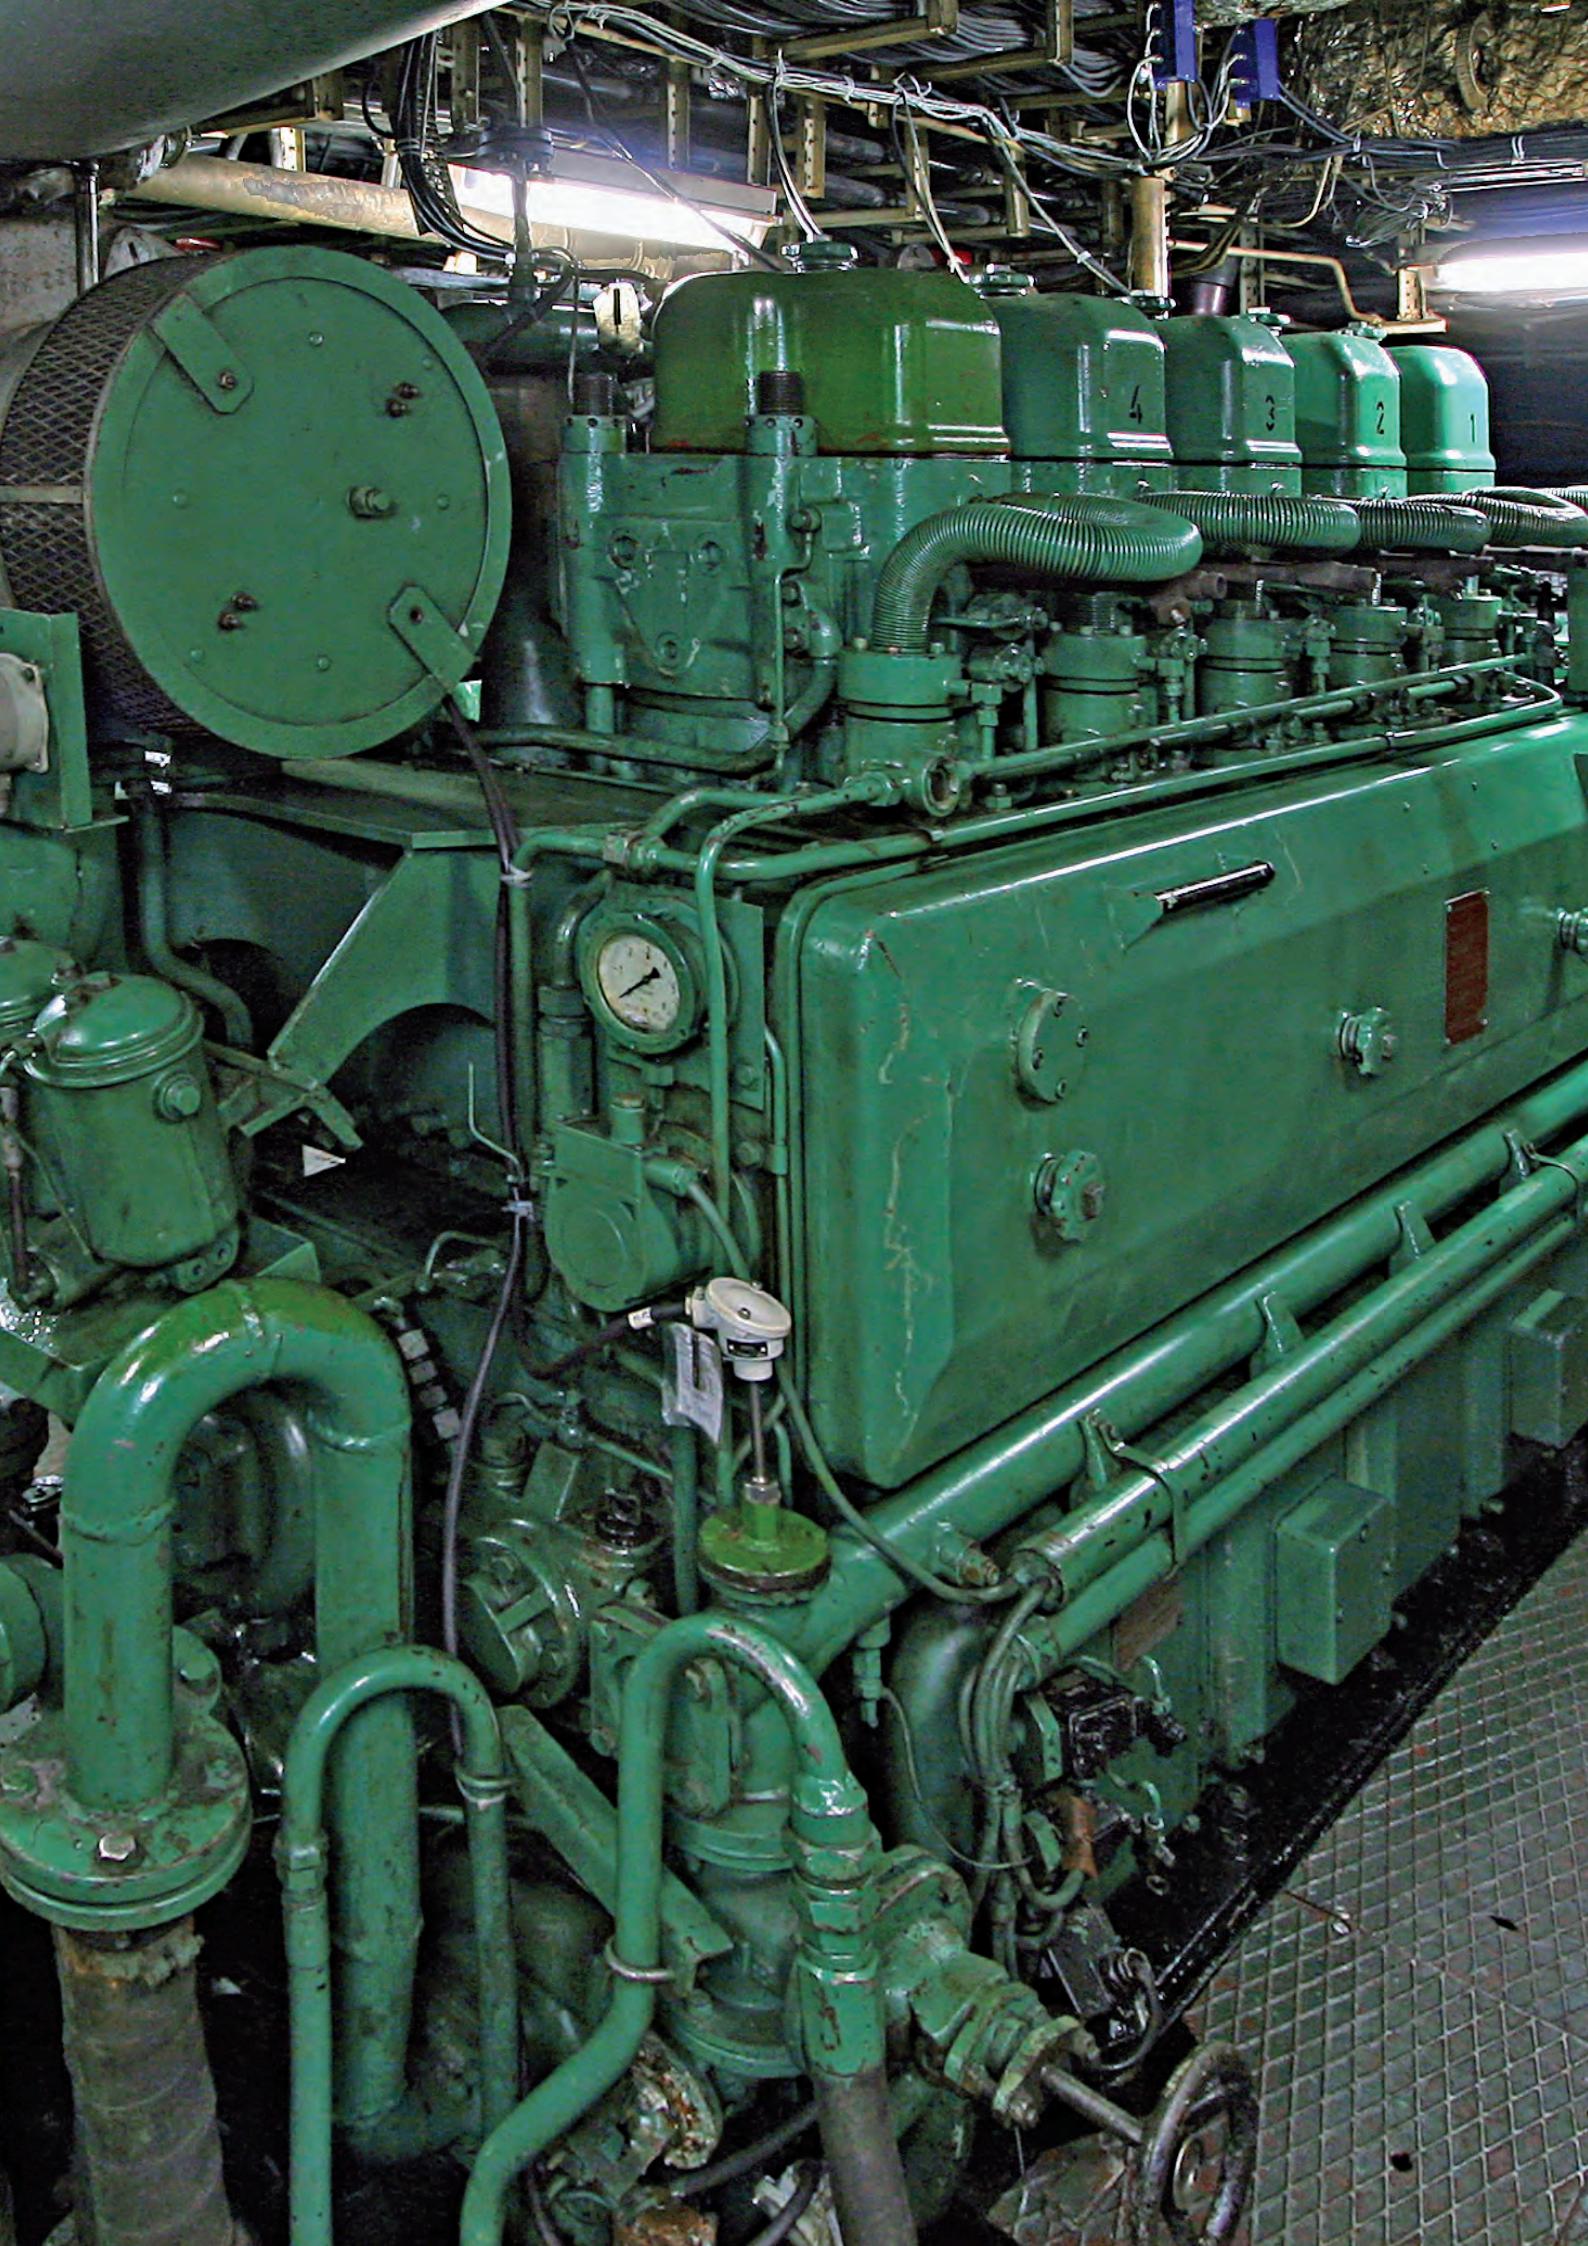

RADOX® 155 are flexible single core and multi core cables offering excellent resistance to heat, hot pressure and aging. The electronically crosslinked insulation offers high mechanical ruggedness. It will not melt and is resistant to most media as well as insulating varnishes and impregnating resins. Brief exposure to heat up to +280 °C will not have any lasting effect.

You will find more detailed information and the description of additional products for the coil winding products industry in the «RADOX wires and cables for the coil winding industry» catalogue, item no. 84022718.

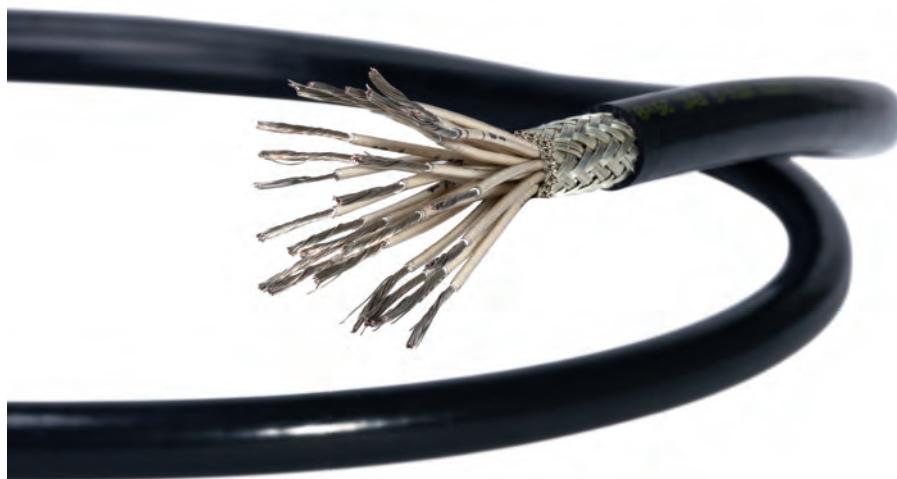

## Flexible single core cables and wires for coil winding products

- RADOX 155, wires and flexible cables
- RADOX UL

These transmission lines offer high power handling capacity and heat resistance. They require little space and therefore allow the construction of high performance yet compact and light weight equipment.

# Cables for power and signal transmission in Marine/Diesel Engine applications

Our RADOX® insulation material for cables was developed with special applications in mind which require high reliability even under adverse environmental conditions. It offers excellent resistance to heat and chemicals as well as to electrical and mechanical stressing. Our single core and multi core cable solutions for marine applications are suitable for stationary as well as mobile uses. They have small diameters, standardised dimensions and require only a short time to install.

## Marine cables with DNV-GL, ABS, BV, CCS approvals

- RADOX 125 IEC marine transmission line
- RADOX MFH control, data and power transmission lines for marine applications
- Data cable for Ethernet and CAN-BUS with marine approval
- SHF 2 mud jacket according to NEK 606

These cable types are particularly distinguished by their resistance to fuels and lubricants, alkalis and acids.

- Light-weight, space saving hybrid solutions meeting the most rigorous demands
- Highly abrasion resistant single cores for corrugated copper cables
- Customised, multifunctional system cables
- Versatile cable and element combinations
- High temperature data bus for marine applications

# Cables for power and signal transmission in offshore applications

HUBER+SUHNER develops and produces high grade solutions that are suitable for the most extreme environmental conditions. They can be installed in very tight spaces and will satisfy even the most stringent demands. HUBER+SUHNER is the professional partner in the development and production of system solutions which incorporate all our knowledge and engineering expertise.

**Unpredictable conditions, fulfillment of extreme environmental and operating requirements while meeting top quality standards.**

- RADOX® flexible single core, signal, control and power cables
- Offshore cables with DNV-GL, ABS, BV, CCS approvals:
- RADOX 125IEC marine transmission line
- RADOX MFH control data and power transmission lines for offshore applications
- Data cable for Ethernet and CAN-BUS with offshore approval
- SHF2 mud jacket according to NEK 606

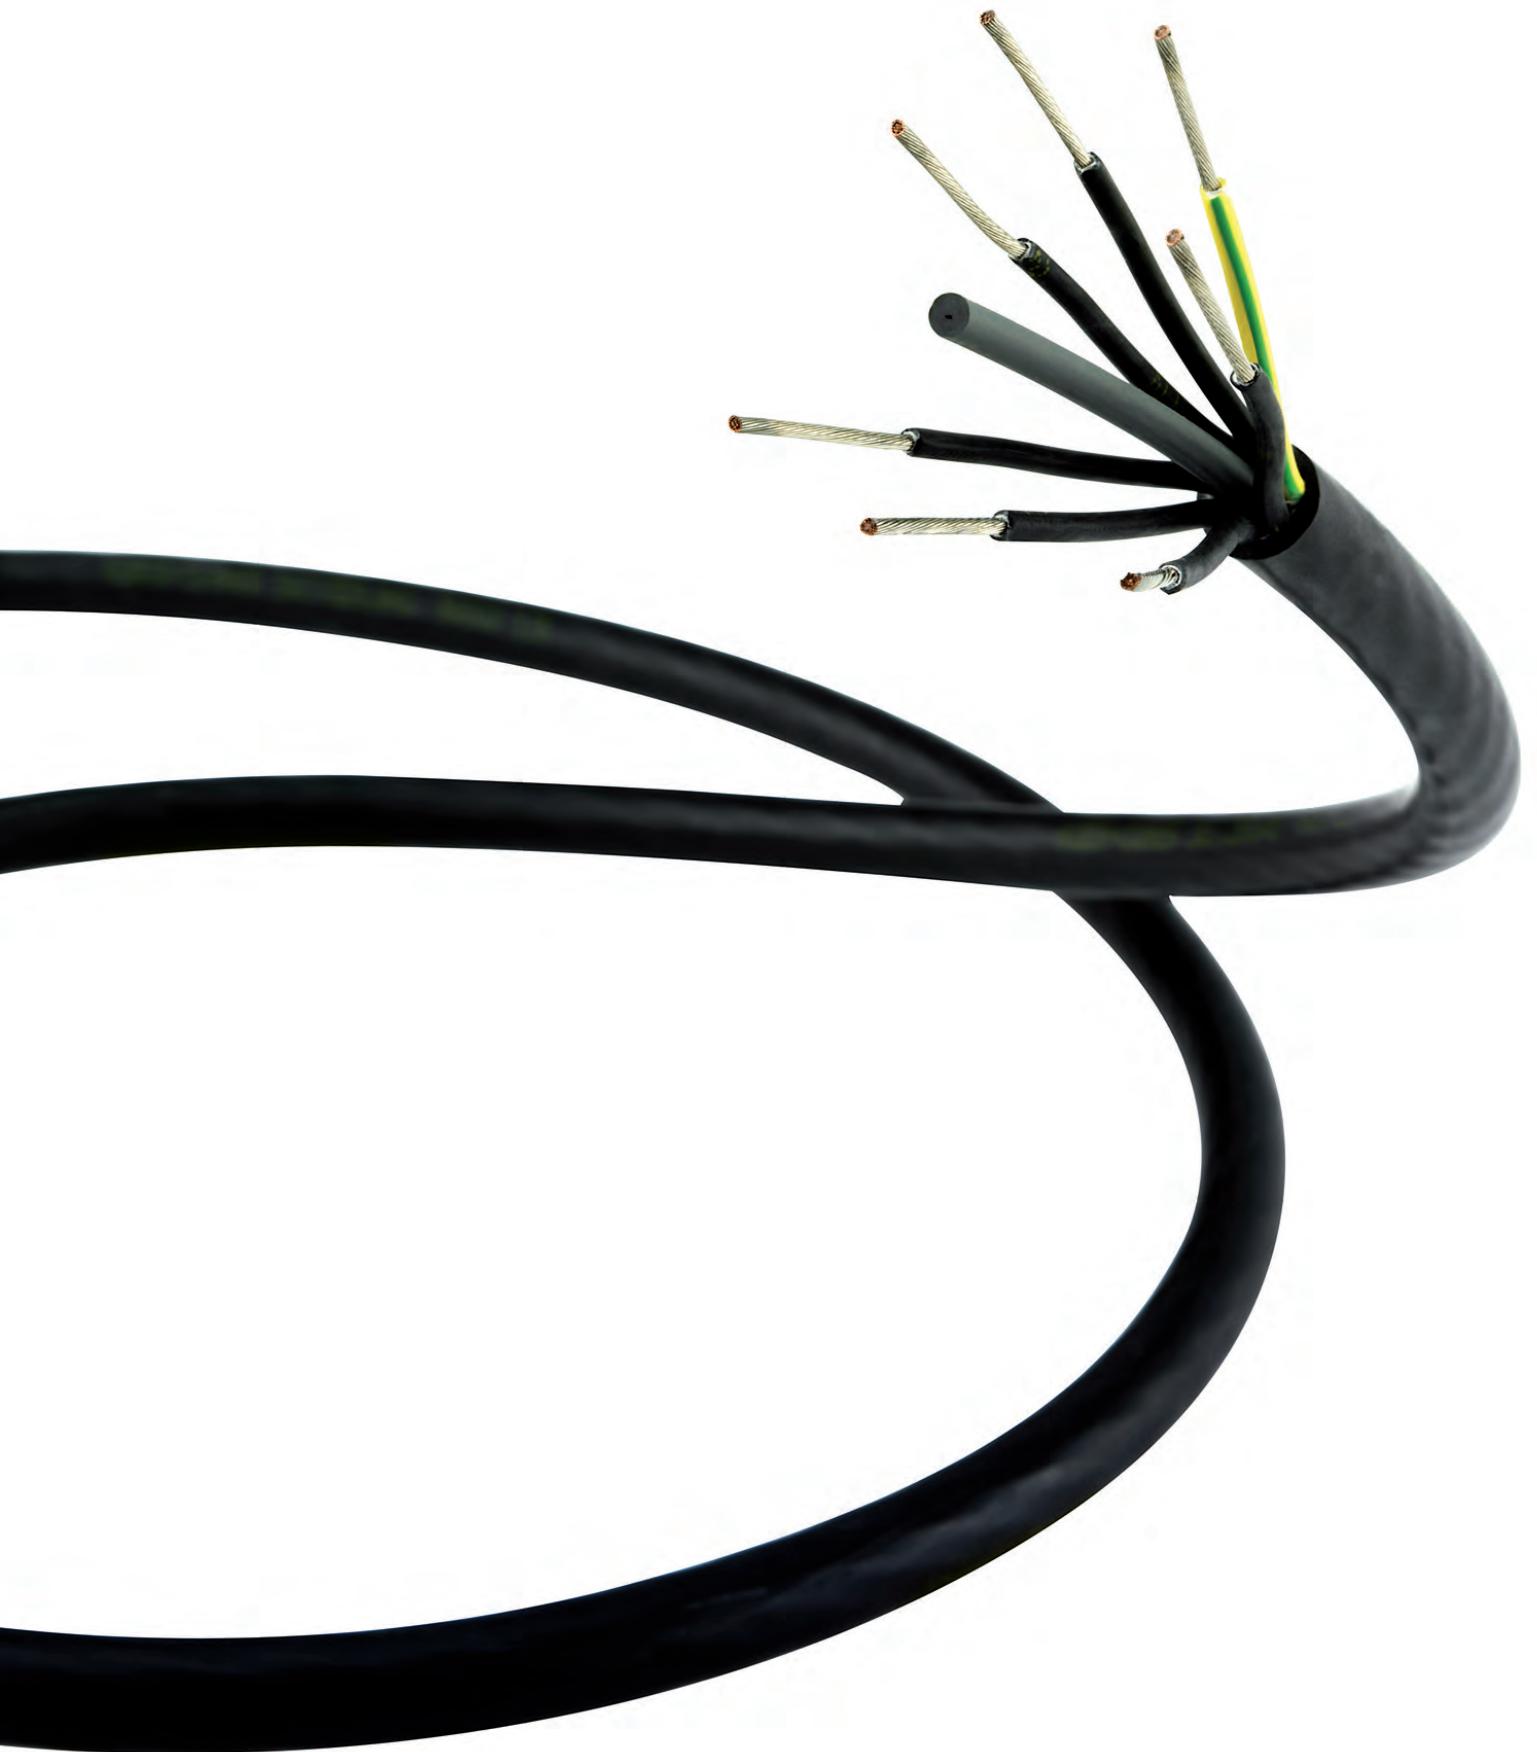

RADOX single core and multi core cables have been developed and are produced for high grade offshore applications.

- Wide temperature range
- Stationary as well as mobile applications
- Small overall diameter
- Flexible and rugged
- Light-weight and space saving solutions
- Chemical and mechanical resistance

and 2011/65/EU (RoHS).

# RADOX® 125 (2<sup>nd</sup> generation)

Flexible single core

- Excellent high and low temperature and ozone resistance
- Weatherproof
- Halogen free
- Flexible, easy to strip and process
- High resistance to thermal pressure
- High abrasion resistance

## Application

For protected and fixed installation inside electrical equipment, especially suitable for the connection of motor windings, switchboards, magnets and transformers.

## Composition of cable

① Conductor	Stranded tin plated copper, EN 60228 / IEC 60228 cl. 5
② Insulation	RADOX 125
	Type EI5 modified, EN 50363-5
	Type HF90 modified, IEC 60092-360
	extruded irradiation crosslinked polyolefin
Core colours	various, on request

## Technical data

Temperature range	-40 up to +125 °C
Maximum permitted operating temperatur of the conductor EN50565/IEC 60092.	+90 °C
Short circuit temperatur rating of the conductor EN50565/IEC 60092	+250 °C
Minimum bending radius	Outer diameter < 12 mm Outer diameter > 12 mm
	3 × D 4 × D

## Cross- section 1 - 300 mm<sup>2</sup>

Rated voltage	U0/U	600/1000 V AC
Maximum permitted operating voltage cond.- earth	720	V AC
Maximum permitted operating voltage cond.- cond	Um	1200 V AC
Maximum permitted operating voltage cond.- earth	VO	900 V DC
Maximum permitted operating voltage cond.- cond	1500	V DC
Test voltage	3500(8400)	V AC (V DC)

## Cross- section 0.25 - 0.75 mm<sup>2</sup>

Rated voltage	U0/U	300/500 V AC
Maximum permitted operating voltage cond.- earth	320	V AC
Maximum permitted operating voltage cond.- cond	Um 550	V AC
Maximum permitted operating voltage cond.- earth	VO 410	V DC
Maximum permitted operating voltage cond.- cond	820	V DC
Test voltage	2000(5000)	V AC (V DC)

# RADOX® 125

Control and power cable, screened

- Excellent high and low temperature and ozone resistance
- Weatherproof
- Halogen free
- Flame retardant
- Soldering resistant
- Flexible
- In case of fire no corrosive gases and low smoke emission
- Easy to strip

## Application

Permanent installation indoor and outdoor for the connection of fixed and loose parts.

## Composition of cable

① Core:	
Conductor	stranded tin plated copper, acc. to EN 60228, class 5
Insulation	RADOX 125
Core colours	extruded and electron beam crosslinked polyolefin copolymer
2 up to 5 core acc. to CENELEC HD 308 (see page 75)	
6 core and more: black numbered with yellow/green earthing other colours on request	
② Fillers (optional)	RADOX 125
③ Separator (optional)	plastic tape
④ Screen	copper braid, optical coverage: $\geq 85\%$
⑤ Separator (optional)	plastic tape
⑥ Sheath	RADOX 125M
Colour	extruded and electron beam crosslinked polyolefin copolymer
	black

## Technical data

Voltage rating U <sub>0</sub> /U	$\leq 16 \times 0.50 \text{ mm}^2$	450/750 V AC
Test voltage	$\leq 16 \times 0.50 \text{ mm}^2$	2500 V AC
Voltage rating U <sub>0</sub> /U	$> 16 \times 0.50 \text{ mm}^2$	600/1000 V AC
Test voltage	$> 16 \times 0.50 \text{ mm}^2$	3500 V AC
Temperature range	fixed	-40 up to +125 °C
Min. operating temperature	flexing	-25 °C
Max. conductor temperature	at short circuit (max. 5 s)	+280 °C
Min. bending radius	fixed	4 x cable-dia.
	flexing	5 x cable-dia.

## The cables are in conformity with:

Halogen free compound	fulfilled	EN 50363
Corrosivity of combustion gases	pH $\geq 4.3$ , $\sigma \leq 10 \mu\text{S}/\text{mm}$	EN 50267-2-2
Amount of halogen acid gas	HCl + HBr $\leq 0.5\%$	EN 50267-2-1
Content of fluorine	HF $\leq 0.1\%$	EN 60684-2, # 45.2

Various colours on request.

# RADOX® UL4486 / CSA AWM I/II A/B

Control cable - UL approved - 300 V

- Excellent high and low temperature and ozone resistance
- Weatherproof
- Easy to strip and process
- Flame retardant
- In case of fire no corrosive gases and low smoke emission
- Flexible

## Application

Permanent installation indoor and outdoor for the connection of fixed and loose parts.

## Composition of cable

① Cores:	
Conductor	stranded tin plated copper, acc. to EN 60228, class 5
Insulation	RADOX
Core colours	various, on request
② Fillers (optional)	RADOX
③ Sheath	RADOX 125M
Colour	grey

## Technical data

Voltage rating	300 V AC
Test voltage	2000 V AC
Operating temperature	+125 °C
Max. conductor temperature	+280 °C
Min. operating temperature	-25 °C
Min. bending radius	-40 °C 5 × cable-dia.

## Standards

Appliance wiring material	CSA C22.2 no. 210.2	AWM I/II A/B 125 °C 300 V FT1
Appliance wiring material	UL 758	style 4486

# RADOX® MFH

Power, instrumentation and control cables, marine and NEK606 approved

RADOX MFH-S B

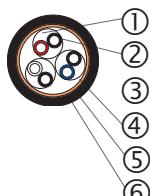

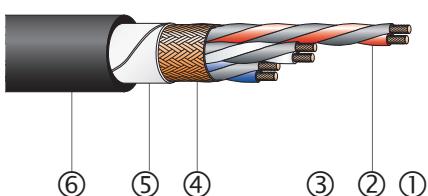

Power, instrumentation and control cables, screened

54

All our cables fully comply with the European directives  
76/769/EWG, 2003/11/EG, 2000/53/EG, 2003/53/EG  
and 2011/65/EU (RoHS).

# RADOX® MFH

MFH-S, control/instrumentation and power cables, screened

- Ozone, hydrolysis, chemical resistant
- Weatherproof
- Easy to process
- Light weight
- Wide operating temperature range
- Halogen free
- Flame retardant

## Application

Highly flexible cable for fixed and free installations of power, control and lightning applications in harsh environments like diesel engines, ships, oil rigs and other offshore units.

Resistant to oil and drilling fluids according to NEK TS 606.

Suitable for moving cable carriers; flexible up to  $-40^{\circ}\text{C}$  and  $-50^{\circ}\text{C}$  for fixed installation..

## Composition of cable

① Centre (if necessary)	RADOX filler type MA14; RADOX TI301 ( $145^{\circ}\text{C}/20\,000$ hours) stranded tin plated copper, acc. to EN 60228, class 5 optional with pair screen and drain wire see table
② Cores Conductor	RADOX optimised tin plated copper braid, optical coverage: $\geq 85\%$ textile yarn
③ Core colours	RADOX elastomer S FH (SHF 2; SHF mud NEK 606) black and blue
④ Fillers (optional)	
⑤ EMV screening	
⑥ Separator	
⑦ Sheath Colour	

## Technical data

Voltage rating U/ $U_{\text{eff}}$		600/1000 V AC
Test voltage		3500 V AC
Temperature range		$-50$ up to $+145^{\circ}\text{C}$
Min. bending radius	fixed	$\leq 12$ mm $3 \times$ cable-dia. $\geq 12$ mm $4 \times$ cable-dia.
	flexing	$> 12$ mm $5 \times$ cable-dia. $> 12$ mm $6 \times$ cable-dia.

## Fire tests

Flame propagation: Vertical of a single cable	EN 50265-2-1, IEC 60332-1
Content of halogen acid gas	0 mg/g

Fire protection in rolling stock:	
Level of protection	DIN 5510
Hazard level	Level 1 - 4 HL1 - HL3

## Approvals

DNV-GL	certificate no. TAE00002Y1
NEK606	mud resistant
ABS (American Bureau of Shipping)	certificate no. 15GD1369103
CCS (China classification society)	certificate no. HB17W00001
BV (Bureau Veritas)	certificate no. 12915/C0 BV

# RADOX® Databus cables

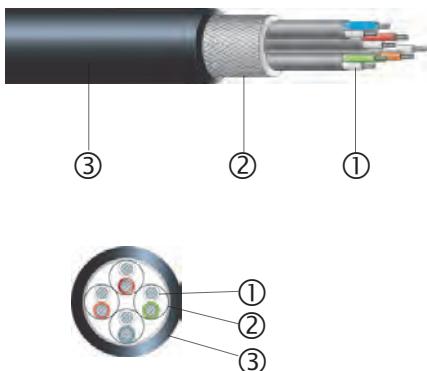

Databus cables for industrial applications, high speed data transmission and frequency range

RADOX CAT7	58
RADOX Marine CAT5e (Ethernet)	
- RADOX Marine CAT5e 2 × {2 × 0.5}	60
- RADOX Marine CAT5e 4 × {2 × 0.5}	60
- RADOX Marine CAT5e (4 × 0.5)	62
RADOX Marine Databus (CAN-Bus)	
- RADOX Marine Databus nx {2 × 0.5}	64
- RADOX Marine Databus {2 × 0.75}	66

All our cables fully comply with the European directives  
76/769/EWG, 2003/11/EG, 2000/53/EG, 2003/53/EG  
and 2011/65/EU (RoHS).

# RADOX® CAT7

Gigabit-Ethernet databus Cat. 7 data transmission

- High speed data transmission at 600 MHz at  $100 \Omega$
- Resistance to acid, alkali, mud and weathering
- Halogen free
- Improved behaviour in case of fire
- Easy to strip
- Soldering iron is resistant and flexible
- Can be fitted with M12 connectors
- Fixed and mobile installation
- Gigabit Ethernet for tough environment

## Application

This Ethernet databus is especially designed for applications in harsh environment.

## Composition of cable

① 4 pairs,  $2 \times 24$  AWG twisted

# RADOX® Marine CAT5e nx (2 × 0.5)

High speed Ethernet databus CAT5e, DNV approved and NEK TS 606, robust

- Particularly robust thanks to larger cross-section
- For data transmission in high frequency ranges
- Halogen free and mud resistant to NEK TS 606
- Databus cable is DNV approved
- Limited fire hazard
- Halogen free
- Flame retardant at high temperature
- Low temperature and ozone resistance
- Solder iron resistant
- Easily strippable and flexible
- Excellent screening properties

## Application

For permanent installation on: ships, oil-gas platforms, refineries and other harsh environment.

## Composition of cable

① Conductor	tin plated copper, stranded
② Core insulation	RADOX COM (XLPE)
Core colours	see table
③ Wrapping over pair	tape and plastic laminated Al-tape
④ Fillers	PE-LD
⑤ EMV screening	braid, tin plated copper
Wrapping	tape
⑥ Sheath	RADOX elastomer S FH (SHF 2; SHF mud)
Colour	black

## Technical data

Voltage rating U/ $U_0$	300 V AC
Test voltage	2000 V AC
Temperature range	-50 up to +90 °C
Min. bending radius	6 × cable-dia

## The cables are in conformity with:

Fire protection in ships	fulfilled	DNV 827.50-2
Vertical flame spread of a single cable	50 < L ≤ 540 mm	IEC 60332-1-2
Smoke density	T ≥ 70 %	IEC 61034-2
Corrosivity of combustion gases	pH ≥ 4.3, C ≤ 10 mS/mm	IEC 60754-2
Amount of halogen acid gas	HCl + HBr ≤ 0.5 % l	EC 60754-2
Content of fluorine	HF ≤ 0.1 %	IEC 60684-2, 45.2

## Approvals

DNV-GL	certificate no. E-14199
NEK606	mud resistant

# RADOX® Marine CAT5e (4 × 0.5)

High speed Ethernet databus CAT5e, DNV approved and NEK TS 606, quad

- For data transmission in high frequency ranges
- Halogen free and mud resistant to NEK TS 606
- Databus cable is DNV approved
- Flexible and thin wall construction
- Flame retardant at high temperature
- Low temperature and ozone resistance
- Solder iron resistant
- Easily strippable
- Excellent screening properties

## Application

For permanent installation on ships, oil-gas platforms, refineries and other harsh environment.

## Composition of cable

① Conductor	tin plated copper, stranded
② Core	insulation RADOX COM (XLPE) WH (no.1) - WH (no.2); WH (no.3) - WH (no.4)

# RADOX® Marine Databus nx (2 × 0.5)

Databus for CAN Bus application, DNV approved and NEK TS 606

- CAN technology
- Largely resistant to acids, oil and other chemical media
- Databus communication in ships
- Can be installed in dry and wet areas
- Can be used in tough industrial environments
- Halogen free and flexible
- Flame retardant at high temperature
- Low temperature and ozone resistance
- Solder iron resistant
- Easily strippable
- Excellent screening properties

## Application

For permanent installation inside of ships to connect fixed parts.

## Composition of cable

① n × 2 cores (Databus) Colours	conductor	flexible tin plated copper
② n × cores 0.5 mm <sup>2</sup> type Radox 125 RW Core colours	insulation	RADOX foam

# Electrical formulas

## Formulas

Required conductor cross section for electric cables

given	Direct current	Single phase alternating current	Three phase alternating current
Voltage drop, current	$\frac{200 \cdot L \cdot I}{\gamma \cdot u_0 \cdot U}$	$\frac{200 \cdot L \cdot I \cdot \cos\varphi}{\gamma \cdot u_0 \cdot U}$	$\frac{173 \cdot L \cdot I \cdot \cos\varphi}{\gamma \cdot u_0 \cdot U}$
Voltage drop, power	$\frac{200 \cdot L \cdot P}{\gamma \cdot u_0 \cdot U^2}$	$\frac{200 \cdot L \cdot P}{\gamma \cdot u_0 \cdot U^2}$	$\frac{100 \cdot L \cdot P}{\gamma \cdot u_0 \cdot U^2}$
Voltage drop, current	$\frac{200 \cdot L \cdot I^2}{\gamma \cdot p_0 \cdot P}$	$\frac{200 \cdot L \cdot I^2}{\gamma \cdot p_0 \cdot P}$	$\frac{300 \cdot L \cdot I^2}{\gamma \cdot p_0 \cdot P}$
Voltage drop, voltage	$\frac{200 \cdot L \cdot P}{\gamma \cdot p_0 \cdot U^2}$	$\frac{200 \cdot L \cdot P}{\gamma \cdot p_0 \cdot U^2 \cdot \cos^2\varphi}$	$\frac{100 \cdot L \cdot P}{\gamma \cdot p_0 \cdot U^2 \cdot \cos^2\varphi}$

### Key

$I$  = Current in ampère  
 $\gamma$  = Conductivity (copper 56, aluminium 34)  
 $L$  = Conductor lengths (single) in meters  
 $P$  = Transmission power in watts  
 $p_0$  = Power loss in % of the transmission power

$A$  = Conductor cross section in  $\text{mm}^2$   
 $u_0$  = Voltage drop in % of the operating voltage  
 $U$  = Operating voltage in volts  
 $\cos\varphi$  = Power factor (usually assumed to be 0.8)

The formulas stated for alternating and three-phase current do not give any consideration to the inductive resistance.

This resistance is a function of the distance of the individual conductors between one another.

Determination of the current if the power is known.

### Direct current:

$I = \frac{P}{U \cdot \eta}$   
 $P$  = Rated power in W  
 $U$  = Voltage in V  
 $I$  = Current in A  
 $\eta$  = Efficiency

### Example:

What is the current that a heating unit of 3.4 kW absorbs at 440 V?  
( $\eta = 1$ )

$$I = \frac{3400}{440 \cdot 1} = 7.7 \text{ A}$$

### Alternating current:

$I = \frac{P}{U \cdot \cos\varphi \cdot \eta}$   
 $P$  = Rated power in W  
 $U$  = Voltage in V  
 $I$  = Current in A  
 $\cos\varphi$  = Phase shift  
 $\eta$  = Efficiency

### Example:

What is the current consumption of an alternating current motor of 1.9 kW at  $\cos\varphi = 0.77$  and an efficiency of 79 %?  
The voltage is 230 V, 50 Hz.

$$I = \frac{1900}{230 \cdot 0.77 \cdot 0.79} = 13.6 \text{ A}$$

### Three phase current:

$I = \frac{P}{1.73 \cdot \cos\varphi \cdot \eta \cdot U}$   
 $P$  = Rated power in W  
 $U$  = Voltage in V  
 $I$  = Current in A  
 $\cos\varphi$  = Phase shift  
 $\eta$  = Efficiency

### Example:

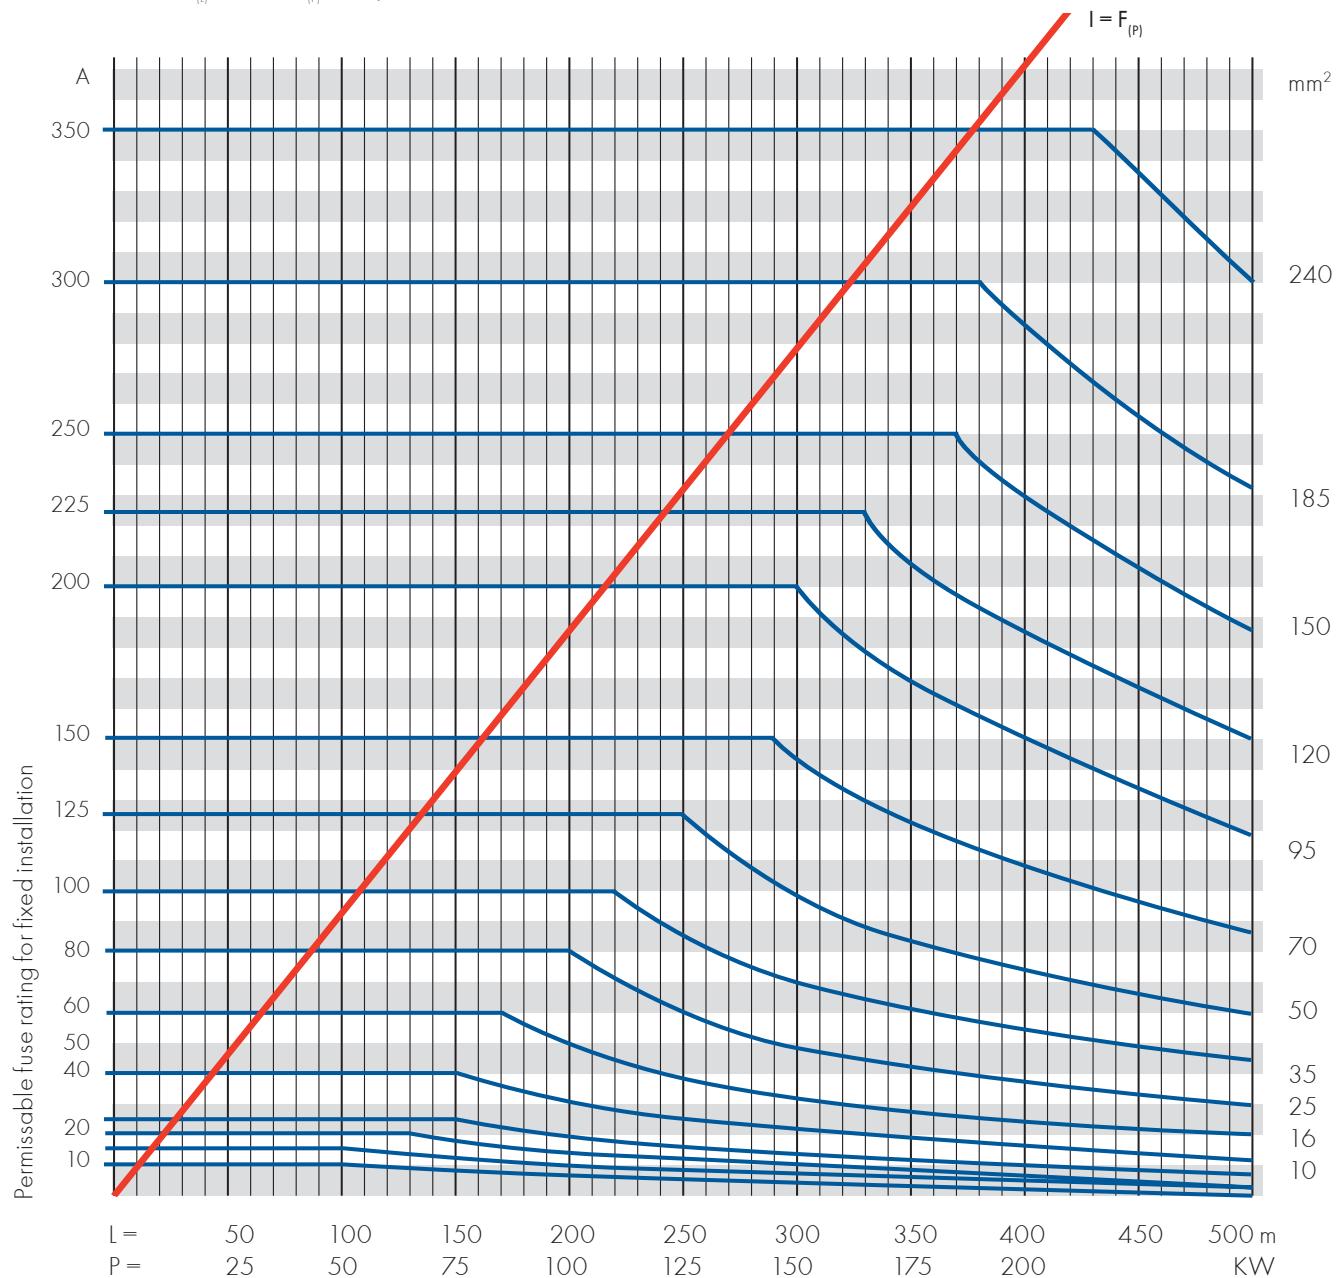

What current does a three phase motor of 22 kW consume at 400 V, 50 Hz, with  $\cos\varphi = 0.89$  and an efficiency of 90 %?

$$I = \frac{22000}{1.73 \cdot 400 \cdot 0.89 \cdot 0.9} = 39.7 \text{ A}$$

# Table of three phase current

Permissible three phase cable loading at 5 % voltage drop

Presentation:  $I = F_{(L)}$  and  $I = F_{(P)} \cos \varphi = 0.82$

Example:

A power of 70 kW is to be transmitted across a distance of  $L = 450$  m. The function  $I = F_{(P)}$  gives us  $70 \text{ kW} \approx 130 \text{ A}$  (mixed users). The function  $I = F_{(L)}$  provides the cable cross section of  $95 \text{ mm}^2$ .

A length of 500 metres would already require a cable of  $120 \text{ mm}^2$  to ensure that the voltage loss and therefore also the power loss would be in an acceptable and economical range.

Representation:  $I = F_{(L)}$  shows that, for example, for  $95 \text{ mm}^2$  the permissible fuse of 200 A determines the load limit up to  $L = 300$  m, i.e.  $U_v < 5\%$ .

From  $300 \text{ mm}^2$  the cross section can no longer be fully utilised.

## Terminals:

Because of the larger diameter in classes 2, 5 and 6 compared with class 1, you have to select a terminal for these classes that is one nominal cross section larger.

# Guide to installation

Smallest allowable bending radii for power and signal cables

Conductor type	Cable diameter D mm			
Installation method	D ≤ 8	8 < D ≤ 12	12 < D ≤ 20	D > 20
solid, class 1/stranded, class 2				
- carefully bent at connection	2D	3D	4D	4D
- normal use	4D	5D	6D	6D
stranded, class 5 (HUBER+SUHNER)				
- fixed	3D	3D	4D	4D
- flexing	4D	4D	5D	6D

## Allowable tensile stress

1. For installing cables by pulling on the conductors, or by drawing sleeve, the following max. pulling force (P) is allowed:

$$P = 50 \times A \text{ (N)}$$

A = Sum of conductor cross section ( $\text{mm}^2$ )

2. When installing cables with high tensile armouring, the following max. pulling force (P) is allowed:

$$P = 9 \times D^2 \text{ (N)}$$

D = cable diameter over armouring (mm)

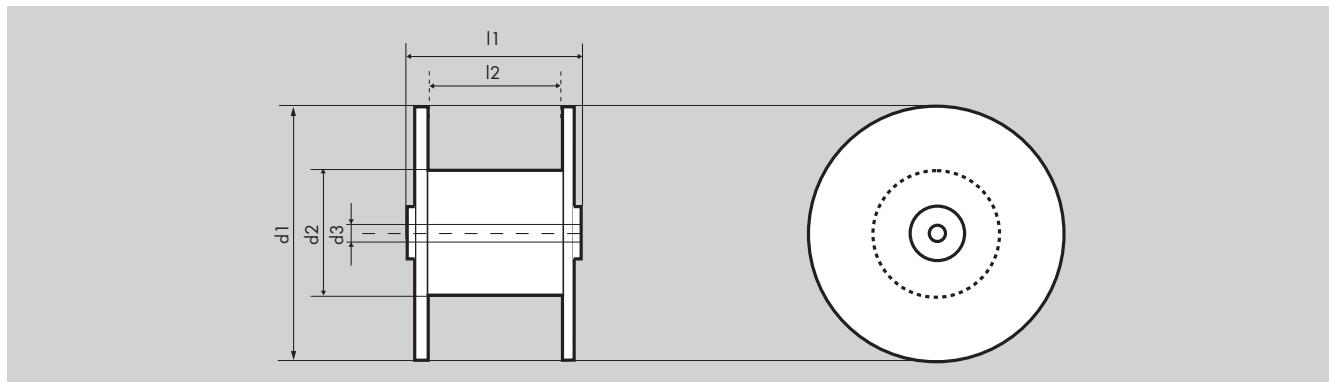

The calculation of pulling forces necessary for installation is done using the following formulas:

Pulling force for installation of a straight section without elevation difference.		Pulling force for installation of a straight section with elevation difference	
P =	$10 \times G \times L \times \mu$	P =	$10 \times G \times (L \times \mu \pm h)$
with	P: pulling force at the end of the stretch (N)	with	h: elevation difference (m)
G:	weight of the cable (kg/m)		Friction coefficient $\mu$
L:	length of the section (m)	0.15 - 0.30	installation with rollers
$\mu$ :	coefficient of friction	0.40 - 0.60	installation in cement pipes
		0.15 - 0.25	installation in plastic pipes
		0.15 - 0.30	- with special lubricating grease
		0.15 - 0.30	- with water

N.B.: Very long cables with thermoplastic sheaths can be pulled into plastic pipes with the aid of lubricants only. Local heating, occurring mainly in bends, may cause the cable to stick to the pipe wall.

# EMC screened cables

The screening of cables can be described by the two coupling quantities of transfer impedance  $Z_t$  and transfer admittance  $Y_t$ . Both coupling quantities are basically a function of the geometry and the environment; depending on the specific application and requirements, the coupling quantities can be optimised for a given cable.

EMI	electromagnetic interference
EMP	electromagnetic pulse
ESD	electrostatic discharge
LEMP	lightning electromagnetic pulse
NEMP	nuclear electromagnetic pulse
TEMPEST	tap-proofness (eaves-dropping protection)
NEXT	near end crosstalk

With HUBER+SUHNER, your screening problems will end.

We can ensure this thanks to the vast experience accumulated in this field responding to every kind of customer need and collaborating continuously with research institutes.

## Measurement engineering at HUBER+SUHNER

Complies with the following standards:

IEC 96-1 and 46 A/DIN 47250/

VG 95373/CCITT/...

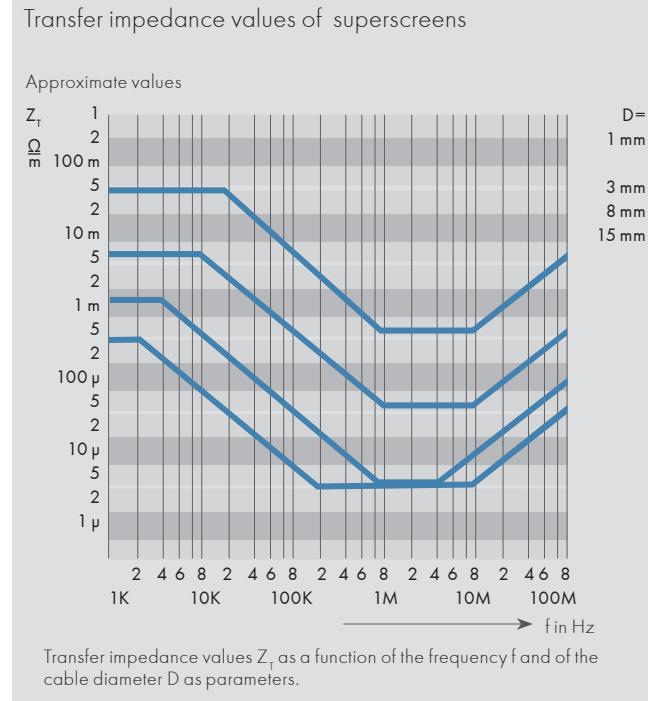

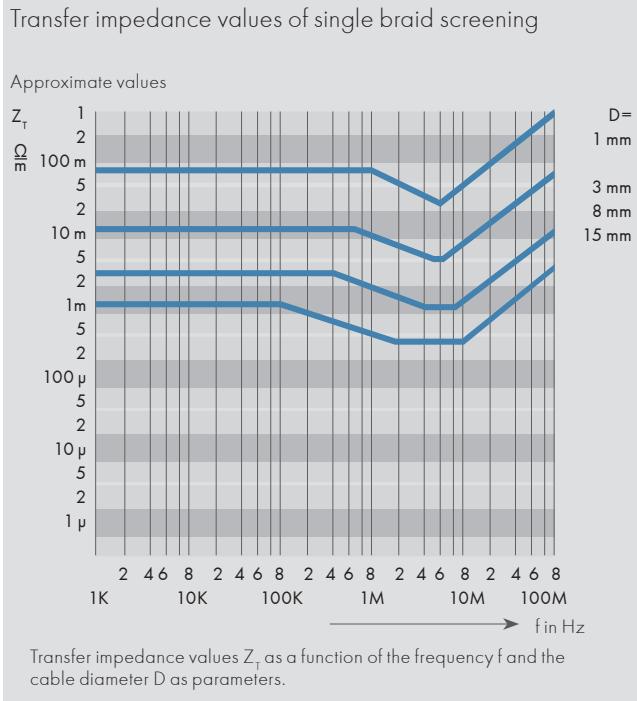

## Screenings for all EMC requirements

HUBER+SUHNER designs, optimises and produces products for a wide variety of performance classes. These products are implemented using different braids, foils, high-permeability intermediate layers, microwave absorbing and semi-conducting layers, mixed screens, etc.

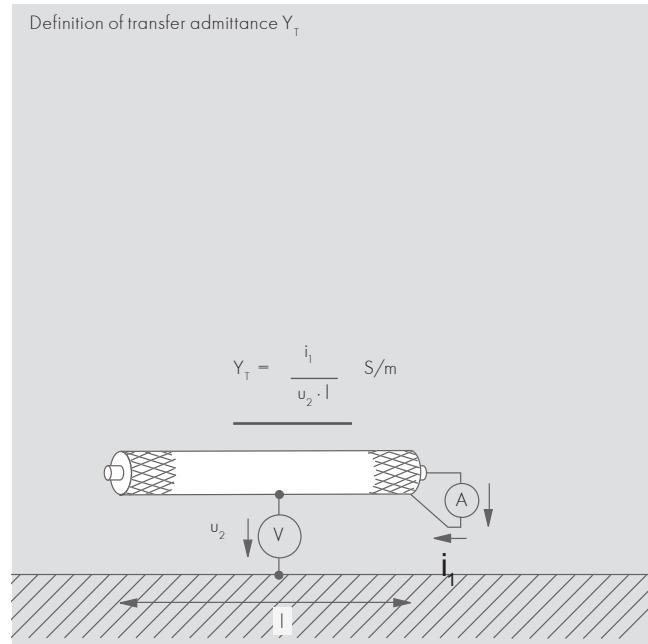

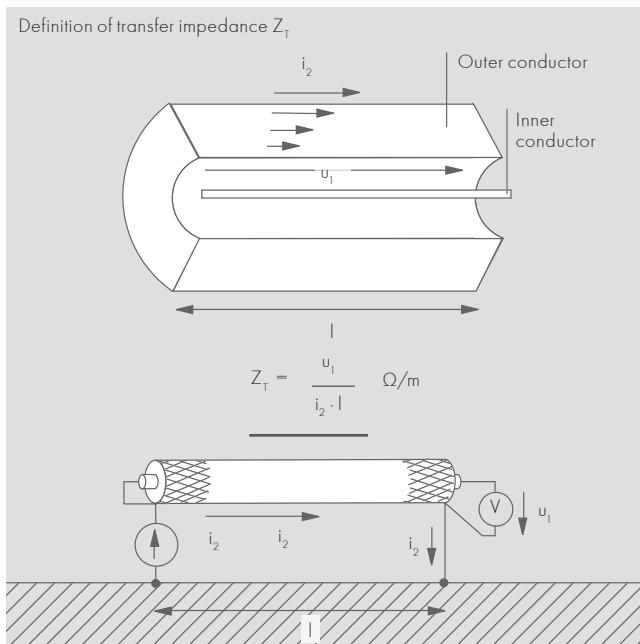

# EMC screened cables

## Screened cables from single braid to superscreen

**The transfer impedance  $Z_T$**   
(also called «coupling resistance») refers to the relationship between the current in one wire and the longitudinal voltage it induces in the other wire (ohmic-inductive coupling).

**The transfer admittance  $Y_T$**   
refers to the relationship between the voltage in one wire and the leak current it induces in the other line (capacitive coupling).

The cable together with its surroundings form a three-conductor system. It consists of two coupled conductors with one common conductor (screen).

Transfer impedance  $Z_T$  and transfer admittance  $Y_T$  are cable quantities which are always defined in conjunction with the surroundings of the cable and the construction of the cable itself.

# Fire test methods

## Fire test methods for electrical wires and cables

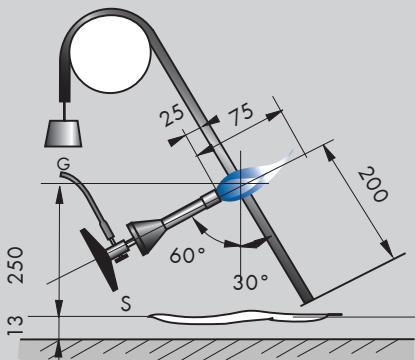

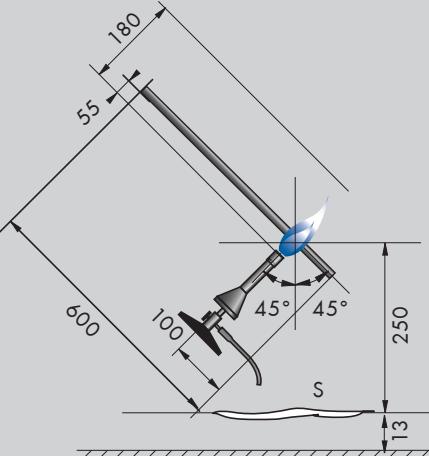

Designation	EN 50265-2-1 IEC 60332-1	EN 50265-2-2 IEC 60332-2
Flame temperature	Determined by the prescribed adjustment of the flame.	Determined by the prescribed adjustment of the flame.
Test duration	cable dia D ≤ 25 mm: 60 s cable dia 25 < D ≤ 50 mm: 120 s	20 s
Conditions	The cable shall be self extinguishing. The damage by fire shall be more than 50 mm from the top fastening clamp.	The cable shall be self extinguishing. The damage by fire shall be more than 50 mm from the top fastening clamp.

Designation	EN 50266-2-4 IEC 60332-3-24	NF C32-070 test 2 UIC 895 VE appendix 7
Flame temperature	Determined by the prescribed propane gas and air volumes.	830 ± 50 °C
Test duration	cat. A (7 l combustible material): 40 min. cat. B (3.5 l combustible material): 40 min. cat. C (1.5 l combustible material): 20 min.	30 min.
Conditions	The damage by fire shall be maximum 2.5 m from the lower burner end.	The cable piece projecting from the pipe shall be not damaged.

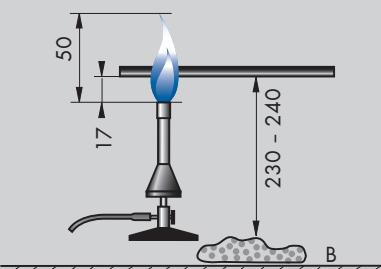

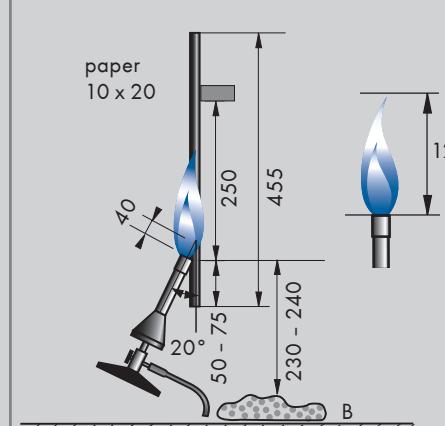

# Fire test methods

## Fire test methods for electrical wires and cables

Designation	MIL-W-22759 and MIL-W-81044 VG 95218-2 procedure 4	VG 95218-2 procedure 3
Flame temperature	min. 950 °C	Determined by the prescribed adjustment of the flame.
Test duration	30 s	cable dia D ≤ 25 mm: 60 s cable dia 25 < D ≤ 50 mm: 120 s
Conditions	The specimen shall not continue to burn for more than 30 s, and damage by fire shall not exceed 76 mm. Dripping material shall not ignite the tensioned tissue paper (S).	The specimen shall not continue to burn for more than 30 s, and damage by fire shall not exceed 76 mm. Dripping material shall not ignite the tensioned tissue paper (S).

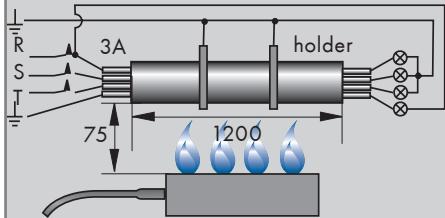

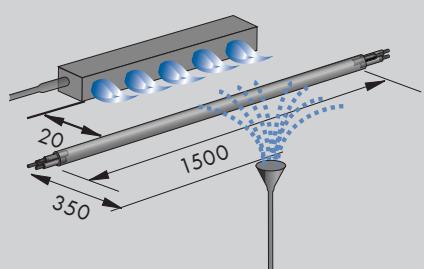

Designation	UL 1581 section 1090 Horizontal specimen AWM flame test	UL 1581 section 1061 UL 1581 section 1080 (VW1)
Flame temperature	Determined by the prescribed adjustment of the flame.	Determined by the prescribed adjustment of the flame.
Test duration	30 s	sect.1061: 60 s flaming, 30 s pause (3 ×) sect.1080: 15 s flaming, 15 s pause (5 ×)
Conditions	The rate of the flame propagation shall not exceed 25 mm/min. Dripping material shall not ignite the cotton wool underneath (B).	The paper shall not be burned more than 25 %, and the specimen shall not continue to burn for more than 60 s. Dripping material shall not ignite the cotton wool underneath (B).

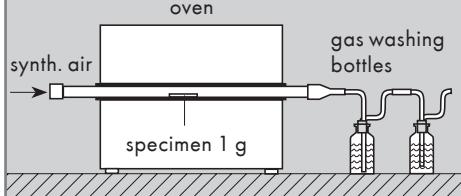

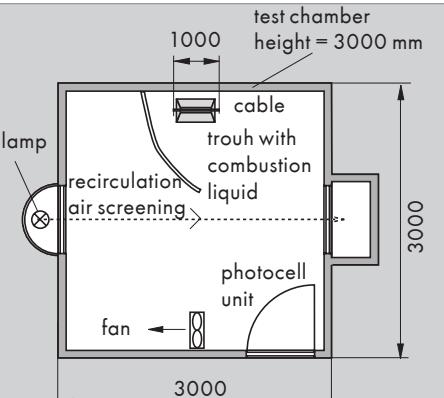

# Fire test methods

## Fire test methods for electrical wires and cables

Designation	IEC 60331-21, IEC 60331-23 DIN VDE 0472-814 BS 6387, category C	BS 6387, category W
Flame temperature	IEC, DIN VDE: min. 750 °C BS: 950 ± 40 °C	650 ± 40 °C
Test duration	IEC: 90 min. recommended DIN VDE, BS: 180 min.	30 min.
Conditions	Zwischen den Adern wird eine Prüfspannung angelegt. IEC: power cable: U <sub>o</sub> /U IEC, DIN VDE: data cable: 110V DIN VDE: power cable: 230/400V BS: all U <sub>o</sub> /U The fuses shall not blow and the incandescent lamps shall not extinguish.	A test voltage is applied between the cores which equals the mains voltage U <sub>o</sub> /U. After 15 min. exposure to the flame, the sprinkler is additionally switched on. The fuses shall not blow and the incandescent lamps shall not extinguish.

Designation	EN 50267-2-2 IEC 60754-2	EN 50268-2 IEC 61034-2
Flame temperature	min. 935 °C	Determined by the composition of the combustion liquid.
Test duration	30 min.	40 min.
Conditions	The pH value of the washing water shall be min. 4.3, its conductivity shall not exceed 10 µS/mm.	The light permeability of the resulting smoke shall be min. 60 %.

# Current carrying capacity

## of RADOX® 125 single core and multi core cables

### Scope

The following tables referring to RADOX connecting leads and multicore cables give easy and fast support for the layout of apparatus and components. The following remarks are based on today's state of the art and practical experience as described in the standard IEC 60216, IEC 60287 and IEC 60364. The application of products will frequently vary from the theoretical values of constant ambient temperature, constant current carrying, homogeneous laying and others. That means, in practice the theoretical current carrying will differ from the real values. For a safe layout of apparatus and components it is recommended to carry out a test with the installed connecting lead or cable under service conditions.

### Definitions

Current load	current passed through the cable during operation
Continuous operation	an operation with constant current whose duration is at least long enough to allow the system to reach thermal equilibrium, but may then go on indefinitely
Current rating	maximum permissible current under determined operating
Permissible operating temperature	maximum permissible temperature on the conductor in continuous operation
Wire	insulated single core
Cable	bundle with jacket with one or more insulated single cores
Conductor temperature	temperature of the surface of the core material

### General remarks

The current rating of a cable depends on the conductor cross section, on the cable design, on the characteristics of the insulation materials, on the installation conditions and, for larger cross sections, on the frequency (skin and proximity effects). Also, additional heating effects due to higher ambient temperatures, due to heating elements and due to bunching of cables have to be taken into account.

The conductor cross section has to be selected in such a way that the actual current load does not exceed the current rating, i.e. the conductor temperature does not exceed the permissible operating temperature. The determining factor is the appropriate, most unfavourable operating condition, encountered during operation over the whole length of the cable.

### Current rating under service conditions $I$ in A

$$I = I_N \cdot f_1 \cdot f_2 \cdot f_3 \cdot f_4 \cdot f_5$$

$I$  in A Current rating for continuous operation under service conditions

$I_N$  in A Current rating for continuous operation under standard conditions

$f_1$  Reduction factor for increased ambient temperature

$f_2$  Conversion factor for deviated conductor temperature, acc. to temperature index, IEC 60216 (20 000 h)

$f_3$  Reduction factor for multicore cables

$f_4$  Reduction factor for increased frequency

$f_5$  Reduction factor for bundled cables

# Current carrying capacity

## of RADOX® single core and multi core cables

### Standard conditions for current rating ( $I_N$ [A])

The tabled values for the current rating were calculated according to IEC 60287 for the following standard conditions:

- Continuous operation
- Single circuit for 3-phase current, single conductor for 1-phase current
- 30 °C ambient temperature and sufficiently large and ventilated spaces, whose ambient temperature is not appreciably increased by the heat coming from the cables.
- 120 °C conductor temperature
- Frequency up to 200 Hz

Installation in air, unrestricted heat dissipation, means that the following installation conditions are observed:

- Distance of the cables from the wall, from the floor, from the ceiling > cable diameter
- Distance between two adjacent power circuits > 2 x cable diameter
- Vertical distance between power circuits laid one upon another for individual cables > 2 x cable diameter and for layers of cables > 200 mm
- Perforated tray with a perforation > 30 % of the total surface

Open trays are continuous supports with vertical sides, but without cover. A possible perforation accounts for < 30 % of the total surface.

Closed ducts are entirely closed. Pipes belong to this category also. The max. filling degree is 60 %.

Maximum permitted conductor temperature for various insulating materials according to IEC 60216 (20 000 h/50 % elongation at break):

PVC, CR	70 °C
PE-X, EPR	90 °C
RADOX 125	120 °C
RADOX 155	135 °C

### Life time expectation

If crosslinked wires are used at higher temperatures than indicated by the temperature index of IEC 60216, the life time is reduced accordingly. Analogical, the life time will increase at lower temperature. RADOX® 125 for example has a life span of 20 000 h at a conductor temperature of +120 °C, which is approx. 2.5 years. If it is used at another temperature, life time expectations are as follows:

Example RADOX 125, i.e. 120 °C/20 000 h

160 °C	1 250 h
150 °C	2 500 h
140 °C	5 000 h
130 °C	10 000 h
120 °C	20 000 h
110 °C	40 000 h
100 °C	80 000 h
90 °C	160 000 h
